

Multiplying Fractions

Solve the problems

$$\frac{45}{18} \times \frac{3}{9} = \text{---}$$

$$\frac{21}{64} \times \frac{8}{7} = \text{---}$$

$$\frac{45}{30} \times \frac{6}{5} = \text{---}$$

$$\frac{18}{63} \times \frac{9}{3} = \text{---}$$

$$\frac{30}{49} \times \frac{7}{6} = \text{---}$$

$$\frac{32}{45} \times \frac{5}{4} = \text{---}$$

$$\frac{18}{35} \times \frac{7}{3} = \text{---}$$

$$\frac{12}{81} \times \frac{9}{3} = \text{---}$$

$$\frac{27}{48} \times \frac{6}{3} = \text{---}$$

$$\frac{24}{10} \times \frac{5}{8} = \text{---}$$

$$\frac{36}{15} \times \frac{5}{9} = \text{---}$$

$$\frac{12}{35} \times \frac{5}{3} = \text{---}$$

$$\frac{40}{18} \times \frac{9}{8} = \text{---}$$

$$\frac{56}{40} \times \frac{8}{7} = \text{---}$$

$$\frac{54}{42} \times \frac{6}{9} = \text{---}$$

$$\frac{40}{81} \times \frac{9}{5} = \text{---}$$

$$\frac{49}{12} \times \frac{6}{7} = \text{---}$$

$$\frac{63}{20} \times \frac{4}{9} = \text{---}$$

$$\frac{45}{63} \times \frac{7}{9} = \text{---}$$

$$\frac{63}{16} \times \frac{8}{9} = \text{---}$$

$$\frac{27}{8} \times \frac{4}{3} = \text{---}$$

$$\frac{9}{63} \times \frac{9}{3} = \text{---}$$

$$\frac{30}{12} \times \frac{3}{6} = \text{---}$$

$$\frac{18}{28} \times \frac{7}{6} = \text{---}$$
