

Addition et soustraction de fractions

Place les bulles de multiplications pour obtenir deux fractions de même dénominateur.

$\frac{2}{4} + \frac{3}{6}$

Multipliers: $\times 3$, $\times 3$, $\times 2$, $\times 2$

Each fraction has a dashed circle with a question mark next to its denominator.

$\frac{5}{6} + \frac{1}{8}$

Multipliers: $\times 4$, $\times 4$, $\times 3$, $\times 3$

Each fraction has a dashed circle with a question mark next to its denominator.

$\frac{4}{9} + \frac{2}{6}$

Multipliers: $\times 2$, $\times 2$, $\times 3$, $\times 3$

Each fraction has a dashed circle with a question mark next to its denominator.

$\frac{2}{4} + \frac{5}{6}$

Multipliers: $\times 3$, $\times 3$, $\times 2$, $\times 2$

Each fraction has a dashed circle with a question mark next to its denominator.

$\frac{8}{9} + \frac{3}{6}$

Multipliers: $\times 2$, $\times 2$, $\times 3$, $\times 3$

Each fraction has a dashed circle with a question mark next to its denominator.

$\frac{3}{8} + \frac{5}{6}$

Multipliers: $\times 3$, $\times 3$, $\times 4$, $\times 4$

Each fraction has a dashed circle with a question mark next to its denominator.
